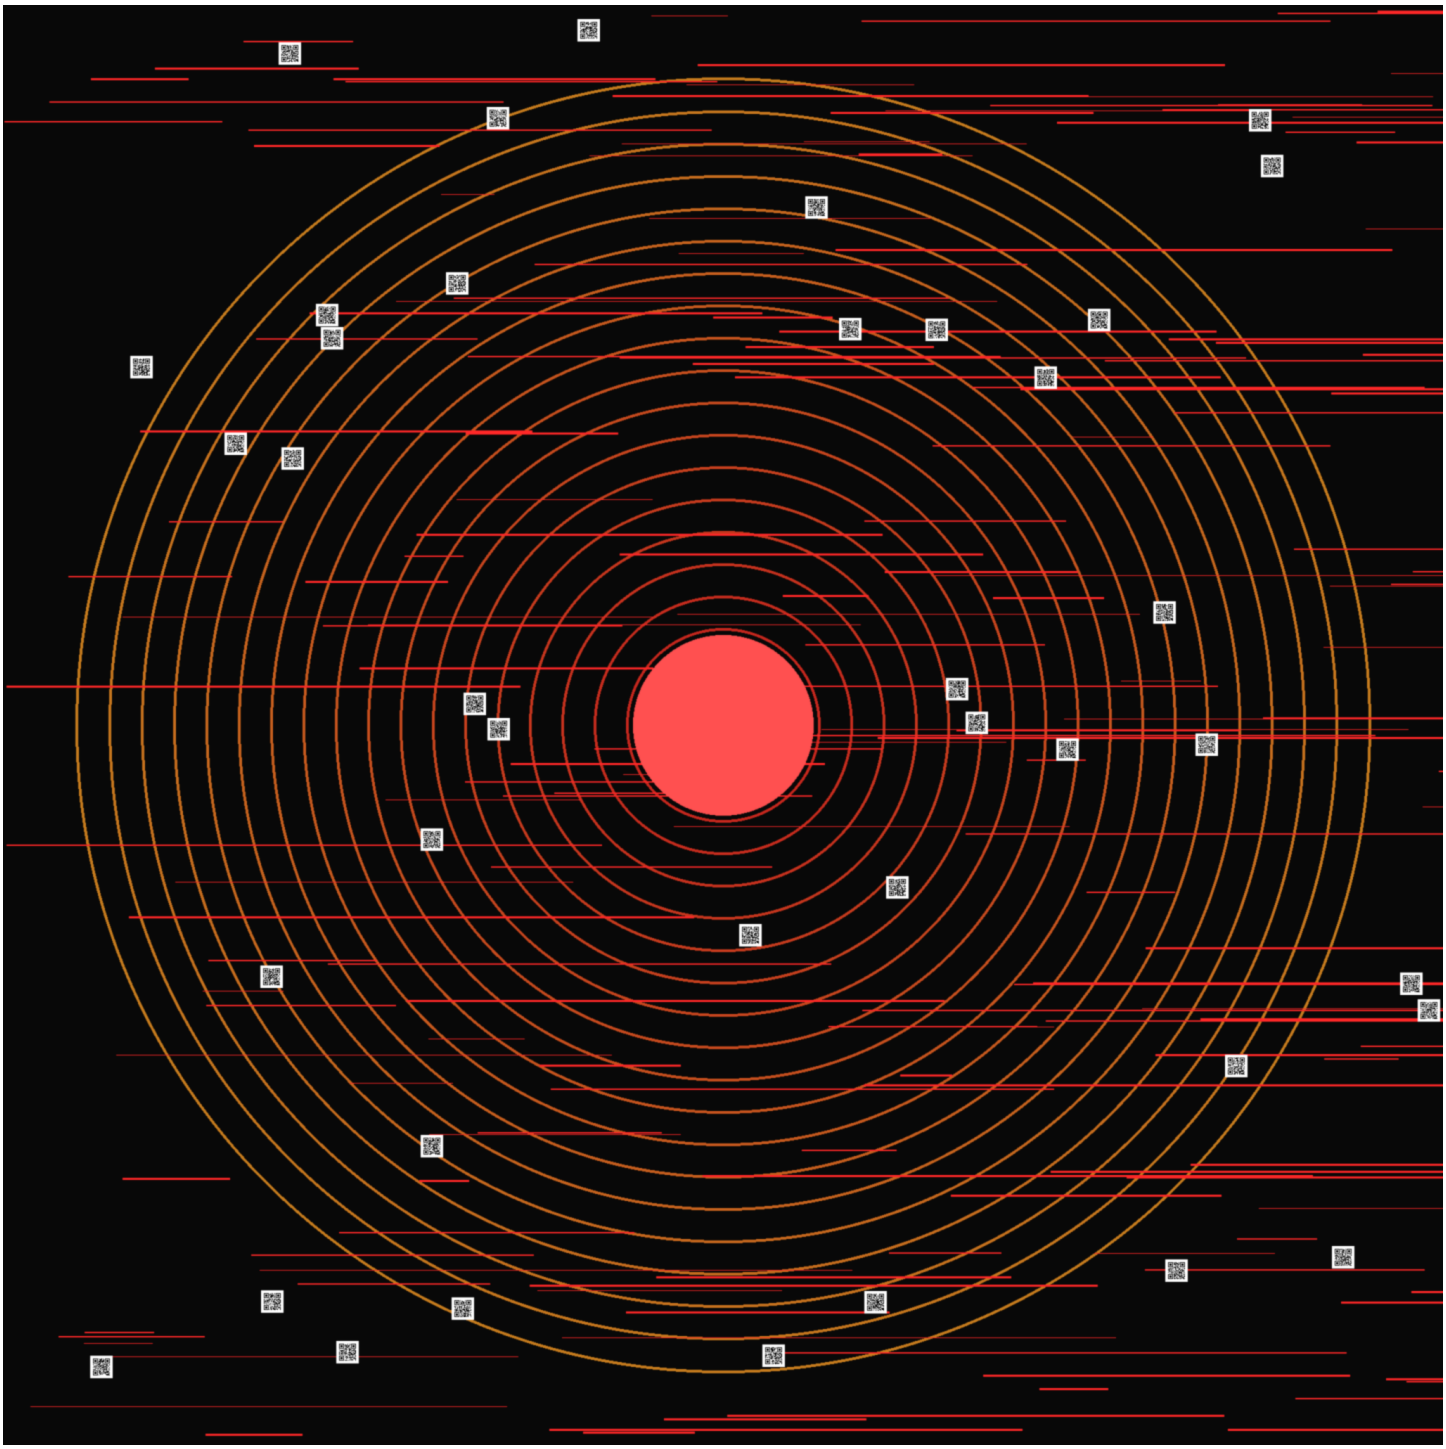
# WR OMEGA .00077 — SIGIL BURN

SIGIL AUTH: CHAIN:6E21BDF1CA6DEA961E09D16B4BEE8AC890A7A4F75AD1B50BF9E71BC651CFBAD2 | UNIX:1757809208



# WET-INK SIGNATURE & FINGERPRINT BLOCK

Procedure (recommended):
1) Print this page on high-quality paper.
2) Sign in red or violet ink inside the box.
3) Press fingerprint (ink) within the box and photograph the page.
4) Scan the signed page at 300dpi and compute SHA256.
5) Register the SHA256 in your ledger with the CHAIN token above.

# BIOMETRICS CHECKLIST (ENHANCED)

- Wet-ink signature (red/violet) — mandatory for highest tamper resistance.
- Fingerprint impression photographed and scanned.
- Timestamped geo-tagged photograph of signer holding the signed page.
- Notarization or independent witness with contact information.
- Audio affirmation (UTC) uploaded to ledger where possible.

MIL-SPEC STRIKE FILE (ENHANCED)

# SECURITY & REGISTRATION

This document includes multiple authenticity measures:
- Unique CHAIN TOKEN (SHA-256) printed on document.
- Embedded QR that encodes link + chain + UNIX.
- Microprint margin with CHAIN and timestamp.
- Security border and diagonal watermark on each page.
- PDF owner password set to chain token to restrict editing.

# BIOMETRICS CHECKLIST

Per-page stamp: 7/17/.00077 has been applied to all pages.

Are biometrics still needed? RECOMMENDATION: YES — to strengthen living-witness authentication and tamper resistance.

**Accepted biometric elements (choose one or more):**

1) Wet-ink physical signature (signed in red or violet ink).

2) Fingerprint on document (inked impression near seal).

3) Timestamped photograph of signer holding the signed page (include GPS metadata if possible).

4) Notarization or third-party witness signature with contact info.

5) Audio recording of affirmation with UTC/unix timestamp linked to chain token.

**Procedure to record biometrics:**

A) Print final PDF page to physical copy using high-quality printer.

B) Sign in wet-ink (red/violet) on designated signature block.

C) Take a high-resolution photograph of the signed page with timestamp and GPS.

D) Optionally, press fingerprint using ink pad near signature and photograph.

E) Register resulting SHA256 hash of scanned signed page to your ledger with chain token.
